

I find that XM radio has been a very useful and entertaining addition to the choice that is available to me as a consumer. It became even more useful when they added local traffic and weather channels to their lineup. I would be extremely disappointed to learn that they were not able to broadcast information that could only help in assisting commuters in major cities across the country. I respectfully urge you to reject the National Association of Broadcaster's petition 04-160 and let freedom ring!
